Markets, Regions & Manufacturing Presence

Voltaris Mobility N.V. • Amsterdam, Netherlands • Founded 2016

“Drive the Current.”

Where Voltaris Operates

Voltaris sells vehicles in 31 countries across four continents and operates manufacturing, research and retail facilities on a global basis. The company organises its commercial operations into four regions: Europe, North America, Asia-Pacific, and the Middle East & Africa. Europe remains the company's largest single market by volume, but Asia-Pacific is the fastest growing.

Regional Breakdown

Region	Countries	FY2025 Deliveries	Share
Europe	14	263,000	43%
Asia-Pacific	9	196,000	32%
North America	4	122,000	20%
Middle East & Africa	4	31,000	5%

Europe

Europe is the heart of Voltaris' business and home to its Amsterdam headquarters and Rotterdam battery gigafactory. The strongest national markets are Germany, the Netherlands, Norway, France and the United Kingdom. Norway, with its near-total EV adoption, has the highest Voltaris market penetration per capita of any country. The company benefits from Europe's dense charging infrastructure and supportive emissions regulation.

Asia-Pacific

Asia-Pacific is anchored by the Shenzhen manufacturing hub, which supplies China, Japan, South Korea, Australia and South-East Asian markets. China is both Voltaris' largest manufacturing base and a fiercely competitive sales market. The Bengaluru centre in India leads the company's AI and autonomy research, while India is also an emerging sales market for the entry-level Pulse and Vega models.

North America

North American vehicles are produced at the Austin, Texas plant, which serves the United States, Canada and Mexico. The United States is the company's single largest country market for the premium Orion and Atlas models, and Austin is the primary launch site for the Voltaris Go robotaxi service.

Middle East & Africa

The Middle East & Africa region is the smallest but among the most strategically interesting. Gulf states such as the United Arab Emirates and Saudi Arabia are investing heavily in smart-city projects, and Voltaris has positioned its autonomous fleet technology at the centre of several of these initiatives. South Africa serves as the company's entry point into the broader African continent.

Manufacturing & Charging Network

Voltaris operates three vehicle assembly plants (Austin, Shenzhen and a smaller European line near Eindhoven) and one dedicated battery gigafactory in Rotterdam. Supporting all of this is VoltGrid, the company's proprietary fast-charging network, which spans 47,000 charging stalls across its active markets, concentrated along major highways and in metropolitan centres.

- 3 vehicle assembly plants and 1 battery gigafactory.
- 47,000 VoltGrid fast-charging stalls across 31 countries.
- Retail presence through 214 Voltaris Studios (company-owned showrooms).
- Regional parts and service centres in every active market.
