The Current Voltaris Model Range

Voltaris Mobility N.V. • Amsterdam, Netherlands • Founded 2016

“Drive the Current.”

The Voltaris Range

Voltaris offers a complete family of battery-electric vehicles, each built on the shared VoltCell platform and equipped with the Halo autonomy system. The range spans from an affordable city car to a luxury flagship and a purpose-built autonomous robotaxi. All ranges quoted are on the WLTP cycle.

Model Overview

Model	Segment	Range (km)	0–100 km/h	Starting Price
Pulse	City car	420	7.9 s	\$26,500
Vega	Compact hatchback	510	6.8 s	\$33,000
Aero	Mid-size sedan	640	5.4 s	\$47,000
Atlas	Mid-size SUV	600	5.9 s	\$54,000
Orion	Luxury flagship sedan	780	3.2 s	\$96,000
Helix	Autonomous robotaxi	560	—	Fleet only

Voltaris Pulse

The Pulse is the entry point to the Voltaris brand: a compact, four-seat city car aimed at urban drivers and first-time EV buyers. With a 420 km range and a starting price of \$26,500, it is the company's highest-volume model and a key part of its growth strategy in India and South-East Asia.

Voltaris Vega

The Vega is a five-door compact hatchback that balances affordability with a longer 510 km range. It is the best-selling Voltaris model in Europe and is popular as both a private vehicle and a fleet car.

Voltaris Aero

The Aero is a mid-size sedan positioned as the company's volume premium offering. With a 640 km range and a 5.4-second sprint to 100 km/h, it competes directly with established executive saloons and is the model most commonly fitted with the full Halo autonomy package.

Voltaris Atlas

The Atlas is a mid-size electric SUV offering seating for five to seven and a 600 km range. It is the company's most popular model in North America, valued for its space, all-wheel drive and towing capability.

Voltaris Orion

The Orion is the flagship: a luxury sedan with an 780 km range — the longest in the line-up — a 3.2-second 0–100 km/h time, and the most advanced interior the company produces. It serves as the technology showcase for each new generation of Halo and VoltCell.

Voltaris Helix

The Helix is unlike the others: a purpose-built autonomous robotaxi with no steering wheel or pedals, designed solely for the Voltaris Go fleet service. It features lounge-style seating for four, a 560 km range optimised for continuous urban duty cycles, and the most sensor-rich configuration of the Halo system.
