

The Road Ahead

Future Models, Upcoming Launches & New Showrooms

Voltaris Mobility N.V. • Amsterdam, Netherlands • Founded 2016

“Drive the Current.”

What's Coming Next

Voltaris' product roadmap extends the range upward in capability and outward in access. Over the next three years the company plans new flagship and family vehicles, a next-generation robotaxi, and a major expansion of its Voltaris Studios retail footprint. This document outlines the future line-up and where customers will be able to see it.

Upcoming Models

Model	Type	Expected Range	Planned Launch
Nova	Next-gen flagship sedan	850 km	2027
Atlas Max	Large 7-seat SUV	640 km	2027
Helix II	2nd-gen robotaxi	620 km	2028
Pulse+	Long-range city car	500 km	2026

Voltaris Nova

The Nova will become the new flagship, replacing the Orion at the top of the range in 2027. It is expected to deliver an 850 km range — the longest the company will have produced — and to debut the next generation of the VoltCell battery and the Halo autonomy system. The Nova is intended as Voltaris' technology showcase and the first consumer vehicle engineered for eventual unsupervised Level 4 driving on approved routes.

Atlas Max

The Atlas Max extends the popular Atlas SUV into a larger, seven-seat family vehicle aimed especially at the North American market, where demand for spacious electric SUVs is strongest. It will launch alongside the Nova in 2027.

Helix II

The second-generation Helix robotaxi, planned for 2028, will expand the Voltaris Go fleet with greater range, lower operating cost and an updated sensor suite. It is central to the company's plan to scale autonomous mobility across many more cities.

Pulse+

Arriving sooner, in 2026, the Pulse+ is a longer-range version of the entry-level Pulse, lifting range to 500 km to broaden the appeal of the company's most affordable model in fast-growing Asian markets.

New Showrooms (Voltaris Studios)

Voltaris will grow its retail network from 214 to a planned 300 Voltaris Studios by the end of 2027. New flagship Studios are planned in premium locations in the following cities:

- Tokyo, Japan — flagship Studio in the Ginza district.
- Dubai, United Arab Emirates — flagship Studio on Sheikh Zayed Road.
- New York, United States — flagship Studio in Manhattan.
- Singapore — flagship Studio in the Orchard Road precinct.
- Paris, France — flagship Studio near the Champs-Élysées.
- São Paulo, Brazil — the company's first Studio in South America.

The Long-Term Vision

Looking beyond specific products, Voltaris' ambition is for shared autonomous electric mobility to become an everyday option in cities worldwide — with the Nova showcasing what a private Voltaris can do, the Helix II carrying the robotaxi business into new markets, and an expanded Studio network bringing the brand closer to customers everywhere it operates.
